

Empire Power Systems Renewable Energy Group - Fact Sheet

About Us: The Renewable Energy Group is one of several departments of Empire Power Systems (EPS). For nearly 60 years, EPS teams have designed, installed and supported distributed power generation systems and back-up power for hospitals, schools, data centers, municipalities, high-tech manufacturers, telecommunications operations, and other commercial entities. Power is our business.

Group History: Empire's Renewable Energy Group has helped design and support the production of electricity from various renewable sources, such as landfill and wastewater gas and biogas from animal waste. Since 2008 Empire has been delivering turnkey solar solutions to commercial customers.

Solar Services Provided: Empire's solar services include everything from complete turnkey packages (including design, engineering and installation) to straight system integration for both off-grid and grid-connected systems. Empire also handles all solar building permits, sees that electrical, building and utility inspections are completed and ensures that systems meet all local codes.

Solar Partners: Empire Southwest is an approved distributor for Kyocera and SunPower. [Kyocera](#) is one of the world's largest vertically integrated producers and suppliers of solar energy products. [SunPower Corp.](#) designs, manufactures and delivers the planet's most powerful solar technology available today.

Installation Period: Varies depending on the size of your solar system and complexity of the installation.

Financial

Incentives: Due to the incentives and rebates currently available, it is estimated that early adopters of solar power can recoup their investment as soon as 7-10 years.

State and federal solar incentive and rebate programs vary according to the size of the system purchased. However, current federal incentives of 30% and state incentives of 10% (with cap) may apply to solar system purchases. For help determining which incentives might apply to your business, contact your utility and/or Empire.

Warranty: Quality solar panel manufacturers offer 20-25-year warranties on their products, and other solar components are warranted for 10-15 years. Empire fully supports all manufacturers' warranties, and our legendary customer service policies apply to everything we install.
